

DBS is hiring!

Group Technology and Operations drives the DBS' digital transformation agenda to allow us to scale new heights and reimagine the future of banking. To thrive in the age of digital disruptions, we focus on innovative ways to scale our cloud-based technologies, utilize modern frameworks and deploy automation best-practices.

We've also built a data-driven culture to develop clear guardrails on data governance and make data more accessible securely. Looking further into the technology horizon, we are exploring key merging technologies such as 5G, Internet of things (IoT), blockchain, quantum computing and AR/VR that will able us drive better business outcomes and customer journey.

Our technology stack:

- Java 8/11
- Spring Boot
- Junit / Mockito
- Karate / Gherkin
- MySQL Database
- Kafka / Avro
- git
- Pivotal Cloud Foundry
- Jenkins

Our values:

- Customer centric design
- Production quality code
- DDD - Domain Driven Design
- TDD - Test Driven Development
- Pair programming
- Automated devops CI/CD pipeline

Seniority Level

Junior up to Mid-Senior level

Employment Type

Temporary, Direct Contract & Full-time

Location

Jakarta

Role: DIGIBANK JUNIOR MICROSERVICE ENGINEERING

Responsibilities:

- Have a continuous improvement mindset.
- Take part in software design activities & discussions.
- Write production quality code.

Requirements:

- Bachelor's degree in computer science, Software Engineering or a related subject.
- Comfortable with practicing TDD and pair programming.
- Well versed in DevOps approach and concepts.
- Experience Object Oriented design principles. (SOLID)
- Experience functional programming design principles.
- Good knowledge on Java standard library.
- Hands on experience with Spring and/or Spring Boot.
- Experience in designing and working with REST APIs.
- English proficient
- Experience in agile software development.
- Experience and proficiency in using Linux/bash shell.
- Using and deploying to cloud platforms.
- Experience in cloud native development.
- Experience in microservices patterns and deployments.
- Knowledge or experience with Kotlin, Golang and/or Rust.
- Experience in using code quality tools like SonarCube.
- Experience in developing high performance and high capacity services.

Role: JUNIOR IOS DEVELOPER

The role will be responsible in developing the front-end Digibank application.

Requirements

- A graduate in computers or Engineering from a reputed university
- Experience with SWIFT & Objective C.
- Solid understanding of the full mobile development life cycle. Proven working experience in iOS development
- Experience working with storyboard, cocoa touch and auto layout.
- Hands on experience in Cloud APIs, push notifications, social media integration, and integration of analytics is an added advantage.
- Experience with automated build and release process
- Has experience in using Maps API, GPS services for iOS application.
- Experience working with iOS frameworks such as Core Data, Core Animation, Core Graphics and Core Text, Core Location.
- Experience with third party libraries and APIs like Alamo fire.
- Familiar with networking and security is a plus
- Working knowledge of the general mobile orientation, architecture, trends and emerging technologies.
- Solid understanding of the full mobile application development life cycle, Agile methodologies.
- Good sense of creativity and innovation
- Understanding code versioning tools such as Git, SVN
- Willingness to learn new technologies if needed
- Excellent analytical, communication and interpersonal skills
- Have skill in OOP and software design knowledge, know how to create software that's extensible, reusable and meets desired architectural objectives

Responsibilities

- Translate designs and wire frames into high quality code
- Maintain high performance, reusable, and reliable code
- Ensure the best possible performance, quality, and responsiveness of the application
- Identify and correct bottlenecks and fix bugs
- Help maintain code quality, organization, and automation

Role: JUNIOR ANDROID DEVELOPER

Requirements

- A graduate in computers or Engineering from a reputed university.
- Experience in proven software development experience.
- Experience with Android SDK
- Experience working with remote data via REST and JSON
- Experience with third-party libraries and APIs
- Working knowledge of the general mobile landscape, architectures, trends, and emerging technologies
- Experience with Java IDEs (e.g. Android Studio, Eclipse), profilers, debuggers, revision control systems (e.g. GIT) and bug tracking (e.g. Jira)
- Hands on working knowledge on DevOps such as Bitbucket, Continuous Integration (Jenkins, Maven), Continuous Deployment (Bamboo). Should have the ability to configure a continuous integration/deployment working environment and Gradle .
- Experience of integrating with Kony Middleware (Mobile fabric) is required but not mandatory
- Experience in working with Financial / Banking applications.
- Accountable for the production of high quality code on a personal level adhering to all software engineer quality standards / benchmark.
- End to end software development life cycle.
- Agile software development techniques.
- Test driven development and knowledge testing automation / Unit testing.
- Knowledge of Object oriented programming and Design concepts.
- Knowledge in MVVM design patterns.
- Experience in Android studio, Android SDK, Java.
- Knowledge in Web service REST/ SOAP.
- Experience in Gradle build system.
- Introduction to Android debug tools such as DDMS, ADB, TraceView, Hierarchy viewer etc.
- Introduction Android UI design patterns and best practices.

Responsibilities

- Translate designs and wire frames into high quality code
- Maintain high performance, reusable, and reliable code
- Ensure the best possible performance, quality, and responsiveness of the application
- Identify and correct bottlenecks and fix bugs
- Help maintain code quality, organization, and automation
